Raj Singh

Customer Success Engineer

GitHub: rajsinghtech
LinkedIn: rajsingh360

EDUCATION

Bachelors in Computer Engineering, Iowa State University
General Education, Wayzata High School

2018 — 2022
2014 — 2018

SKILLS

Kubernetes & Networking Kubernetes (operators, Cluster API), OpenShift, Talos, Cilium, Tailscale, WireGuard, ArgoCD, Helm, BGP, DNS, NAT/CGNAT, DERP, peer relays, 4via6, F5, Palo Alto, Cisco, NGINX, HAProxy, Envoy, Cloudflare

Languages & Cloud Go, Python, JavaScript, SQL, C, Bash; Azure, Terraform, Ansible, SALT; Kafka, Redis, PostgreSQL, Temporal, Datadog, Grafana

Open Source Upstream contributor to CNCF / cloud-native projects — Envoy Gateway, Karmada, external-secrets, k8gb, Cartography, and Tailscale (Kubernetes operator). Author of garage-operator, a Kubernetes operator for Garage S3.

Certifications Certified Kubernetes Administrator (CKA), Cisco CCNA, CompTIA A+

Achievements Eagle Scout, Top 10 BPA National Finalist (Computer Networking)

TECHNICAL EXPERIENCE

Customer Success Engineer
Tailscale

Mar 2025 — Present
California, United States (Hybrid)

- Own enterprise technical health for AI-native accounts on Tailscale across GPU training clusters and Kubernetes platforms — Anthropic, xAI, OpenAI, CoreWeave, Mistral, Figure AI. Embed on sidecar/operator networking, DNS, node quotas, and routing.
- Lead production troubleshooting on critical Linux networking failures — DNS, BGP, DERP, peer-relay reachability, proxy and firewall — across hybrid cloud and bare-metal GPU environments. Internal SME on peer relays, NAT traversal, and containerized Tailscale.
- Translate customer needs into engineering: file issues, shepherd PRs, contribute public docs, and influence the roadmap (traffic steering, scoped destinations, connector architecture). Ship customer-facing open source — tsflow (flow visualizer) and tsdnsreflector (CoreDNS pattern, deployed at Anthropic).

Customer Reliability Engineer
Isovalent/Cisco

Jun 2024 — Mar 2025
Milpitas, CA

- Owned Cilium Enterprise production reliability for OpenAI, Palantir, Databricks, and Capital One — reducing operational risk and improving performance on bare-metal and GPU-adjacent Kubernetes clusters.
- Partnered with Solutions Architects and Engineering to resolve incidents, sharpen documentation, and optimize Kubernetes and networking practices across large-scale environments.
- Ran production readiness reviews and built automated customer-reproduction environments; cut MTTR by authoring knowledge base articles and automating monitoring.

Platform Engineer
Hyatt Corporation

Jun 2023 — Jun 2024
Chicago, IL

- Drove microservice architecture strategy across platform teams, partnering with product engineering on scalable design.
- Engineered networking tooling that reduced customer latency and developer friction — persistent storage, L3-L7 load balancers, kube-proxy, DNS — and streamlined incoming CDN traffic with faster F5 pool changes and automated change requests.
- Stood up Datadog monitoring across platform teams to enforce SLO compliance and enable proactive incident response.

DevOps Engineer
Casey's General Stores, Inc

May 2021 — Jun 2023
Ankeny, IA

- Provisioned on-premises OpenShift Kubernetes clusters from bare metal using Ansible and Salt automation in an agile, iterative deployment model.
- Automated networking workflows through APIs integrated with company resources via containerization and Azure; monitored Palo Alto and Cisco Meraki to surface infrastructure vulnerabilities and reduce store downtime.
- Transformed company-wide asset management and discovery — discovered roughly 22,000 previously unknown network devices, enabling potential tax write-offs up to \$2,200,000.
